ISO 9001:2008 accreditation

maj limited recently completed their annual **ISO 9001:2008** external audit and we are delighted to say we passed with flying colours and our certificate has again been renewed.

maj limited have been **ISO 9001** accredited since **2003**, which we think shows our commitment in keeping quality of service for our Clients on a regular basis.

ISO 9001 is recognised throughout the industry and in some cases is prerequisite for obtaining inclusion on approved lists.

Corwen Office

The Corwen office which has now been open for eighteen months, has proved a good location for us, no more traffic queues to get into work and best of all we occupy the whole building, no more sharing space.

maj limited have now completed **14** years in business, however the past twelve months have proved particularly challenging.

We wish to say a big thank you to our Clients for their continued support and providing us with repeat business.

We at *maj* limited trust we have fulfilled your expectations and provided a quality service over the last twelve months and as we all emerge from the doom and gloom of the recession, we will continue providing Clients with that level of service.

“Corwen Pavilion is to be demolished”

Corwen Pavilion has been in continuous use for nearly 100 years, it staged the very first Welsh Eisteddfod, sadly the building has deteriorated very badly over the years.

Denbighshire Council who currently own the premises therefore want to pull it down.

The local community not satisfied with this, have formed a group in conjunction with Denbighshire Council, to rebuild a new venue, in order to continue Welsh Art & Culture in the region, hopefully for another 100 years.

maj limited are involved as a consultancy to help in the progress of a new building and advise on procurement and budget costs.

Snippets

#

Approximately 13 million tonnes of the construction and demolition waste produced every year is made up of materials delivered to sites but never used.

Buildings account for approximately 44% of total carbon dioxide emissions (18% from the non-domestic sector and 26% from the domestic sector).

Around 25% of UK industry energy consumption is attributed to the production and transportation of construction products and materials

Approximately 50% of the water abstracted in the UK is used in buildings.
